# U. S. NAVY IS SAID TO BE OVER 99 PURE AMERICAN

WASHINGTON, D. C., Jan. 16 .-The United State, navy is 99.7 per ent pure American.

Secretary Denby is proud of his navy, and said today that it was the best navy in the world, backing his statement by figures recently compiled by the bureau of navigation, which shows that on July 1. native born sallors represent 91.82 cent; the balance aliens. The last premises. named number only 352 men. At the end of the fiscal year the navy comprised 119,205 men, of which number 109,547 were natives, 5,829 were born in Guam, Samoa, the Philippines or Virgin islands, and 2.567 were naturalized citizens.

The figures also show it is band picked navy, for out of 133. 808 applicants ,only 72,386 were

It is a healthy navy affoat and shore, according to the statement of the surgeon general.

It is a well-behaved navy, too, as only 6.8 per cent of the total number of discharges were dishonorable and but 6.08 per cent of the total men in the service during the year deserted. Good conduct medals in the service total over 6,000, some men having eight to their credit also testify to the character of the enlisted men.

The distribution of men by state gives New York the lead in both nativity and residence; 13,452 in the former and 14,176 in the lat-Pennsylvania comes second in each list, with 9.951 and 9.299 re spectively. The native sons' lis gives third place to Massachusetts, fourth to Illinois and fifth to Texas.

Out of the total, 119,205 sailors. there are 110,024 white, 5,545 Philippinos, 2.385 negroes, 196 Chibese, 88 Japanese, 139 Samoan 249 Hawatians, 197 Porto Ricans and 86 American Indians.

The American navy also is a young navy, 45,555 being under Manila Bulletin. 21, two thirds of them are 24 years and under, and only 904 are above 54, although 53 are over 60 and still active, Bight per cent of the enlisted men are matried, a total

The big bill that drew crowded you are suffering so you can hardly for \$0.835 men. Over half the men houses at the Strand yesterday, will get around just try Red Pepper Rub. Nothing has such concentrated. 449 of them have served over 20

Salts Before Eating Breakfast.

Uric acid in meat excites the kid-Uric acid in meat excites the kidneys, they become overworked; get sluggish, ache, and feel like lumps of lead. The urine becomes cloudy; the bladder is irritated, and you may be obliged to seek relief two or three times during the night. When the kidneys clog you must help them flush off the body's urinous waste or you'll be a real sick person shorting.

flush off the body's urinous waste or you'll be a real sick person shortly. At first you feel a dull misery in the kidney region, you suffer from backache, sick headache, dizziness, stomach gets sour, tongue coated and you feel rheumatic twinges when the weather is bad.

Eat less meat, drink lots of water: also get from any pharmacist four ounces of Jad Salts; take a table-spoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to clean clogged kidneys an stimulate them to normal activity, also to neutralize the acids in urine, so it no longer is a source of irritaso it no longer is a source of irrita-so it no longer is a source of irrita-tion, thus ending bladder weakness. Jad Salts is inexpensive, cannot in-jure; makes a delightful effervescent

# President's Words Heard by 150,000 in Three Cities BAN FRANCISCO

Piers of Memorial Amphilheatre at Arlington Showing Portion of Crowd of 100,000 that
Assembled on Armietics Day and Heard President Harding with Perfect Clearness.

By ROBERT W. KING

What does it mean to amplify an electric rehably more enormous even thus those its which the astronomers delight to stag per the imagination, is an every day af fair with the telephone engineers wherranged the loud-speakers which were use ca Armistice Day to carry President Hard ing's message to 150,000 persons, the

The number three thousand million miltion million million represents the amplifica-tion which the electric current received that carried President Harding's words across the continent and made them audible to persons in New York and 20,000 s in San Francisco at the same time that they were heard by over 100,000 in Washington. This remarkable achievement is the outcome of many recent scientific research laboratories of the world's uni-

versities and have been applied in a practi-cal way by the Bell telephone engineers. "Something new on the face of the earth" is the expression which irresistibly comes to one's mind as he pictures the huge loud-speakers which were installed at Washington, New York and San Francisco and joined by a single thread-like circuit which stretched out across 3,500 miles of open country and which brought the voices of the speakers and the impressive music of the ceremony to each use of the 150,000

self been a specially invited guest to the ceremonies at Arlington.

"Voices from Heaves," exclaimed many of the audiences as they listened with marked emotion to the hymna and prayers which commemorated one of the most important dates in American history

portant dates in American history. Unbelievably great as is the power of the loud-speaker, it is scarcely more startling to the imagination than are the potential uses of this triumph of science. It will fill a long-felt want in carrying the orator's words to the largest crowds and in enabling sudiences in distant cities to participate in important ceremonies. In-deed, it is likely to bring about as fundamental a change in the political and industrial worlds as the telephone itself. The success of the telephone equipment used on Armistice Day means, for example, that the President of the United States. If

that the Fresident of the United States. If he so desires, without leaving his seat of government, may talk to audiences as-sembled in every state in the Union, or that the head of an industrial corporation from his office will be able to address, simultaneously, his workers gathered in plants all over the country; likewise col-lege commencement exercises, political mitted to any number of audiences of almost any size at one and the same time. The new device bids fair to exert a pro-found influence upon political activities and industrial relations, an influence which certainly will be for the better as it will which erer-increasing numbers and dis-tances have gradually eliminated. The Armbtice Day program could have been extended to many other cities but for the fact that many of the methods and much of the apparatus used in connection with loud-speakers have but recently been per-fected and the parts required could not be manufactured in time.

ular feature of the achievement, the engineers who have developed the loud-speaker assert that it was not in this connection that they encountered their greatest difficulties. The sounds of the greatest difficulties. The sounds of the voice are made up of countless minute and very rapid waves and the amplifiers must function so perfectly that they treat all the hundreds of waves alike. If the apparatus were selective so as to amplify certain waves more than others, the natural quality of the voice would be entirely lost and the sounds supplied by the loud-speaker would be harsh and metallic or even entirely unintelligible. The high perfection to which the apparatus had been brought on Armistics Day was such that a listener even 500 feet from the loud-speaker in New York or San Franciscs could hear the services in Washington with perfect case and distinctness, and even the most literal-minded found it hard to believe that they were not actually within sight of the they were not actually within sight of the impressive burial ceremony.

The electrical system used on Armistice

of equipment. For conveying speech to distant places the most improved type of telephone circuit is employed. This circuit, a development made within the last two years by the American Telephone and Tele graph Company, formed the path by which the voice currents from Washington trav-eled to New York and San Francisco. At these terminal points the received current was greatly amplified and reconverted tato roice waves in the air. In traversing the transcontinental telephone circuit, the voice current becomes weaker and weaker so that value. These amplifiers or telephone repeaters, are located across the country at intervals of about \$20 miles and they produce a total amplification of three thousand

million million fold. Upon being delivered to the loud-speaker at the terminal points, the voice current is only large enough to operate the familiar telephone receiver. To produce speech bond enough to reach many thousands of persona requires a great deal of energy as any reader must know who has tried it. This energy is supplied by the large amplifiers associated with the loud-speakers. These amplifiers do not differ in principle from the telephone repeaters spaced along the transcontinental circuit but they are many times more powerful, a sealth available. only large enough to operate the familiar times more powerful, a starts amplifier, for example, being capable of amplifying the energy of the voice current which is received at least a cultion million times.
